One day I've overheard in a conversation that apparently you should read historical sites before sightseeing. Is it really that important? We shall now find out.

I've been thinking about this statement a lot lately. With all the research I'd done, I can tell you that you probably should. The first reason for it is that the story of a sight you're about to see might be interesting. Sure, that might be just a generic rock, but with context behind that you've read so eagerly it might just become special to you. The second reason is national culture. People will watch in and praise anything with good enough reason. That rock could mean it's the world to so many people and you just casually step on it. You will no longer be welcome there. Those were the reasons to why you should do research. However, there is always another side to it. Of course you want to know everything about that rock but what if the context behind it is disturbing? What if that rock has crushed 18 infants? Will you be able to keep living normally with that knowledge? And also your friends might think of you as a nerd. You probably don't want that.

And finally should you do your research? Probably. If there were only YES and NO, I'd say yes but it's really up to you.
